Emirates Electrical Engineering LLC awarded CP01- 132/11kV Substation Main Contract Works for Dubai Trade Centre District

Dubai, October 30, 2013: Emirates Electrical Engineering LLC, a member of the prestigious Al Rostamani Group, one of the most reputed contractors for high voltage power projects in the UAE, was recently awarded the EPC Contract for the 132/11kV Substation Main Contract Works for Dubai Trade Centre District, forming part of the project located at the Dubai Trade Centre development project site. The objective of this project is to enable Dubai World Trade Centre to meet the power requirements of new planned projects and future developments in Dubai Trade Centre District.

The project involves the Design, Engineering, Procurement, Construction, Installation, Testing and Commissioning of the 132/11kV substation which would be completed within a period of 20.5 months before its handed over to Dubai Electricity and Water Authority.

Emirates Electrical Engineering LLC (EEE) formed in in 1977, has executed a number of prestigious Power Projects for the Nation, which includes, more than 25 Nos. 132 kV Substations, 4,000 KM of 132 kV Cabling works and many Transmission Line works including the first 400 kV Monopole OHL in the Middle East. In addition it also undertakes Industrial electrical works in Petrochemical plants, Aluminum plants, Steel plants, Cement plants & other process industries. EEE has also implemented well established management practices across the organization and in this endeavor has successfully obtained relevant certifications such as ISO 9001:2008, ISO 14001:2004 and OHSAS 18001:2007.

With a well-established organizational setup managed by a highly skilled, experienced and professional workforce, EEE has over the years developed in house capabilities to design, procure and execute major turnkey projects to the satisfaction of its clients which include Middle East utility companies such as MEW, FEWA and DEWA and many private developers and multinational companies.

It also has a complete in-house, fully-fledged infrastructure to execute EPC contracts for Design, Engineering, Procurement, Project Management, Execution, Testing and Commissioning with experienced engineers and technicians. It has all the necessary tools, test equipment including HV Test Van and a dedicated service division to cater to the maintenance/service requirements after commissioning.

Mr. M. V. Prabash, General Manager-Emirates Electrical Engineering LLC., says “we have succeeded in securing this prestigious project in spite of very tough competition from multinational companies and local EPC companies., Due to the capabilities we possess in all aspects of an EPC company and the competitiveness we have developed over the years we are confident in achieving the completion target

within the given time with our qualified and experienced team's dedicated efforts and commitment to excellence."
